Small UAV Coalition to Host Webinar on Remote Identification of Drones October 1
What Is It, Where Is It, and Will it Unlock Ubiquitous Drone Deployment?

WASHINGTON, DC – September 30, 2020 – The Small UAV Coalition will host a webinar tomorrow, October 1, at 3:00 PM ET, ***Remote Identification of Drones – What Is It, Where Is It, and Will it Unlock Ubiquitous Drone Deployment?*** Registration is available here.

Drones are delivering lifesaving supplies, keeping energy and rail lines safe, and restoring power after natural disasters, but they can – and should – be doing more. The Small UAV Coalition invites you to join us for a discussion about how a forthcoming Federal Aviation Administration (FAA) final rule for remote identification of drones will not only support safety, security, and privacy, but also unlock additional regulations necessary to fully embrace the consumer and economic benefits of drone technology.

Dave Lincoln, UAS Strategic Initiatives Manager, Skyward, a Verizon Company; Matthew Satterley, Policy & Government Relations, Wing; and **Bob Brock, Director of Aviation and UAS, Kansas Department of Transportation** will participate in a discussion on what a final remote ID rule will look like and why it is necessary; how it will enable routine operations over people and beyond the visual line of sight; and what is the art of the possible for drones in the United States. **POLITICO transportation reporter Tanya Snyder** will moderate the panel.
